Terms and Definitions

Company Response Rating: The rating of the company's response to a wrongdoing. It is categorized in four ratings (None/Very Limited, Limited, Adequate, Comprehensive) reflecting type and quality of mitigation, prevention and remediation measures taken by the company in response to the controversy, as well as the degree of transparency in communicating such measures to its stakeholders.

Controversy: In the context of the MSA methodology, a controversy is a publicly reported event related to environmental, social, or governance (ESG) issues that may lead to adverse impacts on the environment, society, or on a company's operations, reputation, or financial performance.

Depreciation plan: MSA cases typically follow a standard depreciation plan in which the initial Impact Rating of the case (i.e. Severe, Major, Medium, or Minor) drops in severity in the subsequent assessment cycle, until it becomes inactive. Relevant updates usually prevent depreciation in the subsequent assessment cycle.

Double materiality: The MSA uses a double materiality approach whereby a sustainability issue is considered to be material if it presents a significant impact on society or the environment and/or a significant impact on a company's value drivers, competitive position, and long-term shareholder value creation.

Event: A specific negative incident involving a company, identified in reputable media sources and/or other credible public sources, including but not limited to governmental and non-governmental organizations, legal materials, as well as industry publications. Events are identified, tagged and summarized by S&P Global's proprietary controversies screening model on a daily basis.

Impact Rating: The overall Impact Rating of an MSA Case is determined following a rules-based approach. It can be Minor, Medium, Major or Severe, reflecting the nature of the incident as well as the scale and severity of the incident's impact on the company, its stakeholders or the environment.

MSA Case: An MSA Case is created by expert research analysts if, according to the MSA methodology, a company is considered responsible for a material negative event, revealing that the company's actions are inconsistent with its stated policies and commitments, accepted best practices or regulations. An S&P MSA case does not determine corporate legal responsibility or liability, nor does it assign judgement on corporate behavior.

MSA Multiplier: A value derived from the combination of Impact Rating and Company Response Rating via a predefined matrix that is used to adjust affected CSA criterion scores and thereby determine the overall ESG Score impact of an MSA Case.

Relevant Updates: Relevant updates are the latest pieces of information about a controversy that suggest that the incident covered in the MSA case is still active and might still pose a negative impact on the company, its stakeholders, or the environment (e.g., in the form of new lawsuits, operational disruptions, dismissals, greater impact on stakeholders or the environment than initially assessed, among others).

Responsibility: Refers to the extent to which a company can be reasonably linked through credible proxies to a negative event. In the MSA context, this does not always imply a legal finding of liability or a court-established indictment. Rather it reflects documented indications of corporate involvement, such as court decisions, regulatory findings, fines, settlements, credible investigations, or evidence of breach of policy, law, or widely accepted standards.

S&P Global Corporate Sustainability Assessment: The Corporate Sustainability Assessment (CSA) is an evaluation conducted by S&P Global. It assesses the sustainability performance of companies across various industries. The CSA evaluates companies based on a wide range of environmental, social, and governance (ESG) criteria. It covers areas such as climate change, resource management, labor practices, human rights, and corporate governance. The assessment process involves collecting and analyzing data from companies, as well as conducting industry-specific research.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

S&P Global ESG Score: The S&P Global ESG Score measures a company's performance on and management of material ESG risks, opportunities, and impacts informed by a combination of company disclosures, media and stakeholder analysis, modeling approaches, and in-depth company engagement via the S&P Global Corporate Sustainability Assessment (CSA).

S&P Global Media and Stakeholder Analysis (MSA): S&P Global's Media and Stakeholder Analysis ('MSA') enables S&P Global to monitor companies' sustainability performance on an ongoing basis by assessing current corporate controversies with potentially negative reputational or financial impacts. The MSA should not be interpreted as a determination of the truth, merit, or legal validity of any controversy. The assessment is derived from publicly available reporting and other credible sources, without independent verification through on-site visits or direct investigative activities.

S&P Global's proprietary controversies screening model: S&P Global's proprietary AI and machine learning controversies screening model aggregates and pre-screens content from global, local and regional news sources, governmental and non-governmental organizations, legal materials, as well as industry publications, among others, based on pre-defined filters.

Thematic tag: MSA Cases cover a range of 39 MSA thematic tags, including issues such as corruption, fraud, bribery, labor and employment conditions, occupational health & safety incidents, human rights violations, or environmental violations. MSA thematic tags are mapped to the principles of the UN Global Compact (UNGC) and the Sustainable Development Goals (SDGs).

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Introduction and Context

S&P Global monitors companies' sustainability performance on an ongoing basis by assessing current corporate controversies with potentially negative reputational or financial impacts. The main objective of the controversy analysis is to gain insight into a company's ability to mitigate financially material and reputational risks, as well as negative impacts on stakeholders and the environment, whilst protecting their shareholder value.

S&P Global's Controversy Analysis is rooted in the Media and Stakeholder Analysis ('MSA'), which also forms an integral part of the S&P Global Corporate Sustainability Assessment ('CSA'). Once a relevant event is identified through S&P Global's proprietary controversies screening model, an MSA case may be opened by the research analyst and evaluated during the S&P Global MSA Review, which is performed on an ongoing basis. The opening of an MSA case occurs if there is a media and/or stakeholder story of a company being involved in a specific negative event where its actions are inconsistent with its stated policies and goals, and/or if they expose a failure of management or company systems and processes.

The S&P Global Controversy Analysis considers a range of news stories that potentially have negative impacts across a company's governance, environmental, and social (ESG) dimensions including subject matter of the ten United Nations Global Compact (UNGC) principles and of the seventeen Sustainable Development Goals (SDGs). MSA cases can cover issues such as corruption, fraud, bribery, labor and employment conditions, occupational health & safety incidents, data breaches, unethical marketing practices, supply chain issues, human rights violations, and environmental violations, among others. Exhibit 1 displays S&P Global's 39 MSA thematic tags. For a mapping of the MSA thematic tags and the UNGC principles and SDGs, refer to Appendix III.

Exhibit 1: MSA thematic tag

Environmental		Social		Governance	
Air pollution	Climate change	Land rights	Indigenous groups	Anti-competitive practices	Corruption & bribery
Impact on land/soil	Biodiversity & ecosystems	Human rights	Forced labor	Money laundering	Overcharging
Waste	Water pollution & contamination	Child Labor	Discrimination	Fraud	Terrorist financing
Overuse of natural resources	Overuse of water	Employment conditions	Occupational health & safety	Tax evasion	Embezzlement
Animal welfare	Food loss/ waste	Harassment	Freedom of association & collective bargaining	Data privacy/ security	Product/Service quality & safety
False environmental reporting	Plastics	Community health & safety	Impact on consumers	Unethical marketing practices	Supply chain
		False social reporting		Non-financial misreporting	Financial disinformation & securities fraud

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

S&P Global's Controversy Analysis currently covers over 20,000+ companies.[1] These companies are screened on an ongoing basis and assessed for corporate controversies.[2] Around 12,500 of these companies are also part of the universe of companies assessed as part of the CSA. For companies part of the CSA, MSA cases might negatively impact the companies' ESG Scores.

Public dissatisfaction or accusations regarding legitimate business activities are not considered justification for MSA cases. This includes activities that may be perceived as controversial among certain groups (e.g., investments in tar sands or palm oil), or when a company is mentioned alongside peers as part of broad general criticism of an industry (where multiple companies are named, but no single company's responsibility is clear).

Data Sources and Collection

Corporate controversies are monitored on an ongoing basis through S&P Global's proprietary controversies screening model, which, based on pre-defined filters, aggregates and pre-screens content from global, local and regional news sources, governmental and non-governmental organizations, legal materials, as well as industry publications, among others.[3]

The Media & Stakeholder Analysis (MSA) relies on publicly available information and third-party sources. MSA analysts do not perform independent field investigations, interviews, or original evidence-gathering, and they do not attempt to adjudicate factual disputes.

The presence of an allegation, report, regulatory action, court filing, settlement, or other source in an MSA assessment indicates that a credible source has reported the matter; it does not constitute a finding that the allegation is true, that legal liability has been established, or that any party is culpable. Language in the MSA describing corporate involvement should be read as an analytical characterization based on available sources, not as legal determination.

In addition to the analysis of publicly available sources, S&P Global reaches out to companies with an MSA Case to give them the opportunity to provide relevant information about their actions taken in response to the negative event. While information shared by the companies is used for the assessment of the Company Response Rating, it is treated as fully confidential.

Methodology Overview

An MSA case is created if there is a media and/or stakeholder story of a company being involved in a specific negative event, revealing that the company's actions are inconsistent with its stated policies and commitments, accepted best practices, and / or regulations. An MSA case typically exposes a failure at a company's management level and / or gaps in systems and processes, such as risk management systems and operational controls, resulting in violation of laws and regulations and damage to stakeholders and the environment.

Opening an MSA Case

When a controversial incident is flagged, the decision to open an MSA case is based on (1) company responsibility, (2) incident materiality and (3) timing. At least one of the following conditions must be fulfilled in each category to open an MSA case:

[1] The covered universe will be expanded stepwise to an overall 28,000+ companies.

[2] S&P's Controversy Dataset is based on the Media & Stakeholder Analysis (MSA) methodology.

[3] Prior to March 16, 2026, corporate controversies part of the MSA were monitored, compiled and pre-screened by S&P Global' s former partner RepRisk.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

(1) Company Responsibility[4]:

a) The incident suggests a breach of company policies, internationally accepted standards or national or international legislation.

b) The incident highlights a failure in management or company monitoring systems and processes.

c) The sources suggest a negligent or willful act, or omission on the part of the company as the main cause behind the incident.

d) A court decision holds the company responsible for the incident, or the company has settled outside of a court ruling.[5]

e) A fine on the company has been confirmed by a relevant authority.

f) Judicial and extra-judicial claims with no ruling will be considered for opening a case when at the time of the initial filing:

- the company's involvement in the negative event is clear,
- there is either a material impact on the company or on stakeholders / the environment which has materialized.

g) Non-judicial substantiated investigations expose the company's association with a wrongdoing that has a material negative impact on stakeholders and/or the environment.

h) A former employee or executive of the company is indicted or convicted if the indictment/conviction comes with further implications for the company that indicate company responsibility.

In the context of the MSA methodology, company responsibility is also considered through its business relationships:

i) The company is considered responsible for direct and indirect subsidiaries involved in controversial incidents in which it has a stake of 50% or higher.

j) The company is considered responsible for its joint ventures, regardless of its role as the operating or non-operating entity or its share in the joint venture.

k) The company is considered responsible for wrongdoings committed by an acquired/merged company, given that certain elements of responsibility and materiality remain for the successor company.

l) The company is considered responsible for wrongdoings committed by an investee company if it holds more than 25% of voting rights, or for controversial projects if it provides project-level finance or insurance.

m) A franchisor company is considered responsible for the acts of a franchise if the negative event qualifies as an MSA case for the franchise and the franchisor company has also been explicitly targeted in relation to the negative event.

[4] S&P's Global Controversies Research Team is not an investigative reporting unit, and as such uses the listed criteria as proxies to establish the level of involvement or responsibility of a company in a given incident. Note that the term "company responsibility" used by S&P Global in the context of this methodology guidance does not equal or denote legal liability or responsibility.

[5] In the event a final settlement closes all outstanding claims, a case will only be opened if it comes with financial materiality or other elements of materiality, for example: The claims have been proven true through an authoritative investigation; the settlement terms include measures the company has to take, such as updating policies or processes; the settlement comes with a heightened reputational impact for the company, or the company admitted to the wrongdoing while settling.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

n) The company is considered responsible for wrongdoings of its critical suppliers and Tier 1 suppliers[6], when the negative event qualifies as an MSA case according to our methodology, and the company assessed has been explicitly associated with such supplier.

o) The incident suggests a link to human rights abuses in the context of a conflict-affected or high-risk area[7].

(2) Materiality:

The MSA process leverages the concept of **double materiality**. In this sense, both material negative impacts on the company (internal materiality) or on non-complicit stakeholders or the environment (external materiality) will be considered. Confirmation of a negative material impact on either the company or on non-complicit stakeholders or the environment will be deemed sufficient to consider the materiality element fulfilled. Some indicators of materiality are listed below:

a) The event may have a financial impact, e.g., through fines, penalties, or settlements.

b) The event may have a reputational impact, e.g., if a specific company faces backlash through extensive media coverage on the wrongdoing, litigations and/or allegations which are specific to the company, its activities, products and/or services and go beyond general industry-wide criticism.

c) The event may have a business impact, e.g., if the company is likely to be excluded from doing business in certain regions or if its license to operate is threatened.

d) The event may have an operational impact, e.g., if the incident causes production stoppages, operational disruption or the company needs to do product recalls.

e) The event associated with the company's actions may impact non-complicit stakeholders and/or the environment[8].

(3) Timing:

In addition to the company responsibility and the materiality of the impact, the timeframe of the event needs to be considered. The timeframe refers to the publication of the news, not to the time in which the incident occurred. Cases will be opened when the information published refers to recent developments, including if those recent developments are considered relevant updates to a negative event that happened several years ago.

[6] **Critical suppliers** are defined as suppliers whose goods, materials, services (including intellectual property (IP) / patents) have a significant impact on the competitive advantage, market success or survival of the company. Critical suppliers include high-volume suppliers, suppliers of critical components and non-substitutable suppliers. **Tier 1 suppliers:** refers to suppliers that directly supply goods, materials or services (including intellectual property (IP) / patents) to the company.

[7] Defined as "Areas identified by the presence of armed conflict, widespread violence, including violence generated by criminal networks, or other risks of serious and widespread harm to people", according to the OECD Due diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas.

[8] S&P Global Sustainable1 defines a sustainability issue as material if it presents a significant impact on society or the environment and a significant impact on the company's value drivers, competitive positioning, and long-term shareholder value creation. Material sustainability issues can significantly affect an entity's business operations, cash flows, legal or regulatory liability, and access to capital. They can also significantly improve or undermine an entity's reputation and relationships with key stakeholders, society and the environment. As such, S&P Global Sustainable1 considers double materiality as an integral part of the analysis of corporate sustainability performance and the resulting S&P Global ESG Scores.

Assessment of an MSA Case

Once an MSA case is opened based on Responsibility, Materiality and Timing, it is assessed to determine the incident's severity ('Impact Rating') and the company's response to the incident ('Company Response').

Assessing the Impact Rating

The overall Impact Rating of an MSA Case can be **Minor**, **Medium**, **Major** or **Severe**, reflecting the nature of the incident as well as the scale and severity of the incident's impact on the company, its stakeholders or the environment. The evaluation of the incident's severity i is determined by assessing the parameters in Exhibit 3 across the relevant Environmental, Social and Governance (ESG) dimensions. Each one of these parameters are also individually assessed on a minor, medium, major, and severe scale, which aggregate up to the final Impact Rating of the case.

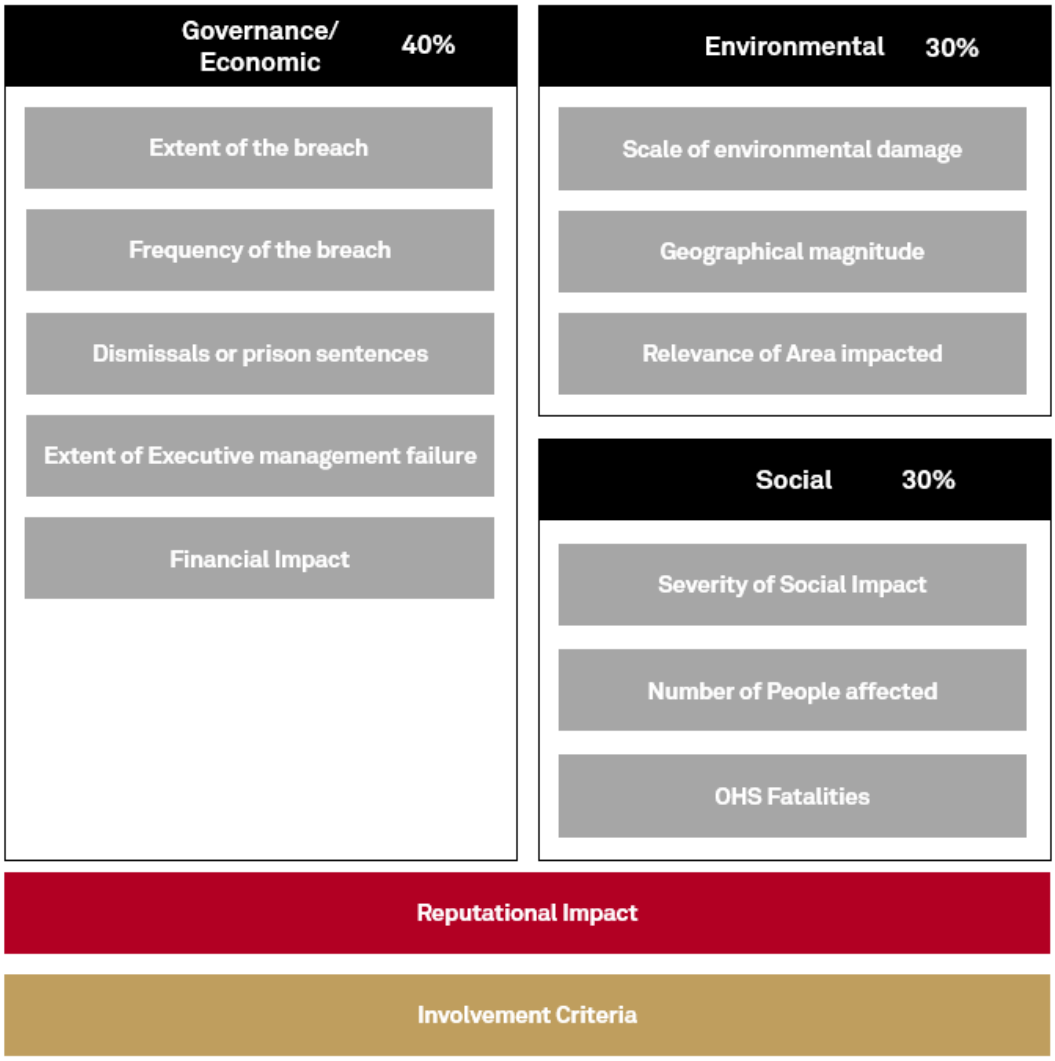

The final Impact Rating of a case is determined by the combination of the assessment of each individual parameter of the applicable Environmental, Social and Governance (ESG) dimension and the assessment of the Reputational Impact as well as the Involvement Criteria if applicable[9], However, broadly speaking, the Impact Rating categories can be defined as:

Minor	Controversies which typically have short-lived, limited, or minor repercussions on the environment, society or a company's value drivers or bottom line.
Medium	Controversies which typically have moderate and medium-term impacts on the environment, society or a company's value drivers or bottom line. While having a moderate impact, such incidents generally do not portray widespread or severe corporate misconduct.
Major	Controversies with long-lasting, widespread, and major negative impacts on the environment, society or a company's value drivers or bottom line. Major controversies usually indicate significant levels of corporate governance misconduct. However, while severe in nature, they typically do not meet the thresholds of the most serious level of harm.
Severe	Controversies with long lasting, extensive, and often irreversible or catastrophic negative impacts on the environment or society, typically resulting in major financial impact on a company's bottom line and value drivers. Generally, includes incidents of a systemic nature involving the most serious levels of harm and crime and / or corporate governance failure. Severe cases may also reflect material violations of the UNGC principles.

[9] The Involvement Criteria is applicable to cases related to controversies linked to the supply chain, business in conflict or high-risk areas as well as cases related to Joint Ventures and investee companies or for wrongdoings linked to controversial projects if the linked company provides project-level finance or insurance.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Exhibit 3: Impact Rating evaluation parameters

Parameters under the Governance & Economic dimension as well as the reputational impact of the case are always assessed, while parameters under the Environmental and Social dimensions are only evaluated if the nature of the incident involves social or environmental impacts.

The individual weight of each of the ESG Dimensions is disclosed in Exhibit 5. Since the Governance Dimension is always applicable to all cases, it has the highest allocated weight. In the scenarios where one or both Environmental and Social dimensions are not assessed, the weights get distributed to the relevant applicable dimensions.

Each parameter under the relevant dimensions is assessed on a Minor to Severe scale, based on the nature of the controversy. Each of the dimensions and parameters within, have weights and a scoring logic assigned. The selections made by the analysts are computed by an algorithm-based tool that automatically calculates the Impact Rating of the case.

Exhibit 4 lists a sample of the guiding questions used for the analytical assessment of each dimension, and thus, the final Impact Rating of a case. Exhibit 5 shows the parameters for the analytical assessment of each dimension and the underlying scales within each of them.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Exhibit 4: Sample of guiding questions used for the analytical assessment of the Impact Rating

Governance/Economic	
Extent of the Breach	• Is the controversy affecting few or multiple units / divisions, or is it a company-wide issue?
Frequency of the Breach	• Is it a one-off incident, or have few similar incidents occurred within the last three years? • Is it a recurring or systemic issue?
Dismissals/ Prison sentences	• As a result of the incident, are there any dismissals, criminal convictions, or prison sentences of employees?
Extent of Management failure	• Is the incident a result of poor management oversight? • Was the company's management aware of gaps or risks and failed to take preventive action? • Was executive management directly involved in the incident?
Financial Impact	• Has the case resulted in significant operational costs? • How does the total cost (fines, settlements, operational costs, etc.) relate to the company's operating income or similar penalties imposed upon industry peers within the last three years?

Environmental	
Scale of environmental damage	• Has the incident resulted in minimal or no significant disturbance of natural habitats, or has it resulted in persistent and large-scale environmental destruction? • Will the remediation take days, months, or rather various years?
Geographical Magnitude	• Is the negative impact restricted to the vicinity of the operations or does it extend to large terrestrial or marine areas?
Relevance of Area impacted	• Is the area protected for its recognized ecological value? • Are there endangered species affected?

Social	
Severity of Social Impact	• Has the socioeconomic or physical wellbeing of stakeholders been negatively affected by the company's actions or products? • Is there an indication of a violation of human rights? • Have vulnerable groups been affected by the negative events?
Number of People affected	• How many people have been affected by the incident? Is it a reduced group or on the contrary has the event impacted a large number of people?
OHS Fatalities	• Has the event claimed the life of workers? • How is the number of fatalities compared to the industry average?

Reputational Impact	• Has the company's reputation been negatively impacted? • Are reputational impacts observed across all regions where the company operates or only in some jurisdictions? • Has the case affected the company's relationship with its key stakeholders, such as customers and business partners?

Involvement Criteria	• Has the company been associated with a wrongdoing committed by one of its suppliers? How critical is the supplier for the competitiveness and operational stability of the company under assessment? Is the supplier a Tier 1 or non-Tier 1 supplier? • Is the company directly causing or contributing to human rights abuses in a conflict-affected or high-risk area? Or is the company indirectly linked to those human rights violations (e.g., through the supply chain)?

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Exhibit 5: Analytical assessment of Impact Rating parameters

Governance/ Economic	Extent of the Breach	**Minor -** Single department, business unit or division
		Medium - Few business units, divisions or subsidiaries
		Major - Multiple business units, divisions or subsidiaries
		Severe - Company wide
	Frequency of the Breach	**Minor -** Old behaviour
		Medium - Repeated behaviour
		Major - Multiple repeated wrongdoing
		Severe - Systemic
	Dismissals/Prison sentences	**Minor -** Low ranking employee
		Medium - Management below executive
		Major - Executives/ Board Members
		Severe - Majority of Executives/Board
	Extent of Management failure	**Minor -** Poor management oversight
		Medium - Executive management failure
		Major - Total executive management failure
		Severe - Direct involvement of C-suit/BOD
	Financial Impact	**Minor -** 0.5-2% last year Operating Income
		Medium - >2-5% last year Operating Income
		Major - >5% last year Operating Income
		Severe - >20% last year Operating Income
Environmental	Scale of environmental damage	**Minor -** Minimal or no significant disturbance of habitat
		Medium - Moderate deterioration of habitat
		Major - Major deterioration of habitat
		Severe - Catastrophic loss of habitat, flora and fauna
	Geographical Magnitude	**Minor -** Impact at localized/restricted area
		Medium - Impact at expanded area
		Major - Impact at large area
		Severe - Impact at extensive area
	Relevance of Area impacted	**Minor -** Impacted area with low environmental value
		Medium - Impacted area with medium environmental value
		Major - Impacted area with high environmental value
		Severe - Impacted area with unique environmental value
Social	Severity of Social Impact*	**Minor -** Impact on political, labor, consumer rights
		Medium - Impact on socio-economic rights, moderate health impacts
		Major - Impact on physical integrity, serious health impacts
		Severe - Gross human rights violations
	Number of People affected	**Minor -** Reduced number of people affected
		Medium - Significant number
		Major - Large number
		Severe - Widespread or severe in severity
	OHS Fatalities	**Medium -** Normalized number of fatalities in 20% of industry
		Major - Normalized number of fatalities in 10% of industry
		Severe - Normalized number of fatalities in 5% of industry
Reputational Impact		
Involvement Criteria		

Reputational Impact

Once the ESG dimensions parameters have been assessed, the Reputational Impact is also evaluated. For that, the relevance of the news that cover the incident together with the number of news replication is considered. Exhibit 8 shows the parameters of the Reputational Impact assessment.

Exhibit 6: Analytical Assessment of Reputational Impact as part of Impact Rating Assessment.

Reputational Impact
Relevance of the News
Outreach

Involvement Criteria

For cases related to the supply chain, business in conflict, joint ventures, investee companies or project-level finance, an additional assessment step to evaluate the **Involvement Criteria** is performed. The Involvement Criteria aims at factoring in the proximity between the company under assessment and the wrongdoing, in situations where the company is not directly responsible for the incident. Exhibit 9 displays the different assessment scales within the Involvement Criteria.

Exhibit 7: Analytical Assessment of Involvement Criteria as part of Impact Rating Assessment

Involvement Criteria			
Limited Involvement	Medium Involvement	Significant Involvement	Direct Involvement

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

a. Supply chain controversies:

For controversies linked to a company's **supply chain**, the MSA methodology uses the concepts of **proximity** and **criticality** to determine the level of involvement of the assessed company ("sourcing company") in the incident.

In the context of the MSA methodology, **Proximity** is defined as the distance between the supplier and the sourcing company. Suppliers can be classified as direct (Tier 1) and indirect suppliers (non-Tier 1).

The **Criticality** element is quantitatively and / or qualitatively determined.

- Quantitively:
  - in terms of the supplier's share of sale to the sourcing company; and/or
  - the purchasing volume of the sourcing company
- Qualitatively, by assessing:
  - the commodity/service involved: The commodity or service supplied is considered "critical" to the sourcing company when it is essential to create value for its customers and could compromise its market's position in case of a supply shortage,
  - the supply market: the structure and composition of the supply market,
  - and the existence of strategic partnerships or alliances: These partnerships can take the form of interoperability (independent companies can share information/processes and work together to achieve greater efficiency), or when the supplier is able to provide to the sourcing company a competitive advantage thanks to its critical capability (know-how, technical capability, cost reduction, increased efficiency).

b. Business in conflict controversies

For controversies related to **Business in Conflict, the methodology** relies on the concepts of direct and indirect involvement and applies to human rights-related controversies arising in situations of conflict and/ or high-risk areas[10]. Direct involvement is understood as the type of engagement where the company or its representatives are portrayed as the main direct responsible of the violation, while indirect involvement is considered as a secondary form of participation where the company or its representatives reportedly contribute to the acts of violence perpetrated by another actor (e.g., by providing financial or logistical assistance, by engaging in partnerships with the perpetrator or its allies that may facilitate the abuses). Mere operational presence in a conflict area with no indication of business links to the perpetrator, is not considered within the scope of the methodology.

c. Joint Venture controversies:

For cases related to **Joint Ventures,** the involvement criteria are determined by the role of the company in the Joint Venture (i.e. operating entity vs. non-operating) or the share the company holds in the Joint Venture (i.e. majority shareholder vs. minority shareholder). This approach leverages the concepts of level of control and strategic or operational leverage.

d. Investing, financing and insurance

For controversies related to alleged **investing, financing and insurance** of companies and/or projects linked to adverse impacts (e.g. environmental, social, or governance), the degree of control (given by the percentage of

[10] Defined as "Areas identified by the presence of armed conflict, widespread violence, including violence generated by criminal networks, or other risks of serious and widespread harm to people", according to the OECD Due diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

investment in the project) or the criticality of the financing provided (given by the amount provided through financing and/or underwriting the project) determines the assessment of the involvement criteria.

Assessing the Company Response

The evaluation of response actions taken by the company is a key component of the MSA assessment. For this part of the assessment, companies with a new MSA case are contacted and given the opportunity to respond with relevant information and plans to address the issue, minimize negative impacts, and prevent reoccurrence. Companies with existing MSA cases which receive updates, are contacted at the discretion of the S1 Sustainability Research Analyst when such developments are considered to require further clarification. Any information provided by the companies in the client portal in the context of an MSA case is confidential and not publicly disclosed.

In case the company does not reply, the company response is assessed based on public information only.

The overall company response will be evaluated and categorized in four ratings (1 – 4) as described in Exhibit 8, reflecting the type and quality of mitigation, prevention and remediation measures taken by the company in response to the controversy, as well as the degree of transparency in communicating such measures to its stakeholders.

Exhibit 8: Rating of Company Response[11]

1 None or very limited	There is no indication that the company has taken any measures, or the measures taken are very limited and do not sufficiently address the consequences of the negative event.
2 Limited	The company has taken measures that are deemed to address the negative event only partially. Generally, a limited response does not include measures considered across all the relevant areas of the company response assessment.
3 Adequate	The company has taken measures that are deemed adequate as a response to the negative event. However, the measures either do not address all relevant assessment areas or they lack the expected level of comprehensiveness to fully tackle the negative event and/or prevent its future re-occurrence.
4 Comprehensive	The company has taken measures that are deemed comprehensive and holistic as a response to the negative event. Such measures address all relevant assessment areas and are considered robust enough to tackle the consequences of the negative event and prevent future re-occurrence.

[11] The described MSA Company Response Rating methodology is applied to MSA cases of companies with ESG Scores 2024 and beyond. MSA cases which impact previous annual ESG Scores continue to follow the previous MSA Company Response Rating methodology which can be found in Appendix II. Cases that impact 2023 ESG Scores and that are set to depreciate as of methodology year 2024 and beyond, will automatically be mapped to the new methodology labels for the 2024 ESG Scores as follows: '1 – No communication and no measures taken' (prev. label) corresponds to '1 – None or Very Limited (new label); '2 – Some communication and no or partial measures taken (prev. label) corresponds to '2 – Limited' (new label); '3 – Adequate communication, appropriate measures taken' (prev. label) corresponds to '3 – Adequate' (new label); '4 – Adequate communication, appropriate measures publicly disclosed' (prev. label) corresponds to '4 – Comprehensive' (new label). Overall, the new Company Response methodology does not have an impact on the structure of the MSA formula.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

The Company Response Rating is determined by the evaluation of the parameters in Exhibit 9 & Exhibit 10 covering the following assessment areas:

- **Direct Mitigation/Emergency Response Measures**: Emergency response or direct mitigation measures refer to measures intended to reduce the immediate impact of an incident or negative event (e.g., the company took emergency measures to prevent a fire from extending to subjacent areas).
- **Prevention Measures**: Prevention measures refer to measures intended to avoid the future reoccurrence of an incident or negative event. Such measures include comprehensive plans that strengthen procedures, policies or systems, training, or that result in restructuring (e.g., the company updated the discrimination chapter of the Code of Conduct and put in place anti-discrimination processes to avoid future discrimination issues).
- **Remediation Measures**: Remediation measures refer to measures aimed at restoring the situation of individuals or groups harmed by business activities and/or the status of the environment negatively impacted to the situation/status before the incident or negative event (e.g., the company compensated the victims and families of a health and safety accident that occurred at its facilities).
- **Transparency Measures**: Transparency measures refer to measures aimed at publicly disclosing about the incident or negative event, and the actions taken by the company to tackle its consequences and prevent further reoccurrence.
- **Nature of Response**: Nature of response assesses whether a company has taken the measures in the above areas proactively or as a response to some authority mandate (e.g., the company has proactively investigated and responded to the discrimination claims raised internally before they were brought before any authority).

Exhibit 9: Sample of guiding questions used for the analytical assessment of the Company Response Rating

Direct Mitigation/Emergency Response Measures	Prevention Measures	Remediation Measures	Transparency Measures
Direct Mitigation/Remediation Measures	Process Measures	Remediation Measures Taken	Disclosure of Measures
If applicable, has the company taken immediate direct mitigation/emergency response measures to reduce the negative effects of a given event?	As a result of the incident, has the company strengthened existing or adopted new processes/mechanisms that can prevent the re-occurrence of wrongdoings?	If applicable, has the company taken remediation measures aimed at restoring the environment or individuals or groups of individuals that have been harmed by business's activities to the situation they would have been in had the impact not occurred?	Has the company disclosed the measures taken in response to the controversy? Is the disclosure comprehensive enough to understand the company actions in relation to the topic? Is the disclosure of measures publicly available?
	Policy Measures	Effectiveness of Remediation	
	As a result of the incident, has the company strengthened existing or adopted new policies that can prevent the re-occurrence of wrongdoings?	If applicable, have the remediation measures taken by the company been effective to remediate the wrongdoing?	
	Training Measures		
	As a result of the incident, has the company put in place additional training on the topic related to the wrongdoing?		
	Restructuring Measures		
	As a result of the incident, has the company restructured or transitioned away from the controversial product/service/activity?		
Nature of Response	In case the company has taken measures, were those measures taken voluntarily or only as a reaction of a mandate from authorities?		

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Exhibit 10: Analytical assessment of Company Response Rating parameters

Direct Mitigation/Emergency Response Measures	25%
Direct Mitigation/ Remediation Measures	No measures in place
	Measures in place but delayed
	Measures in place and timely

Remediation Measures	40%
Remediation Measures Taken	No measures in place
	The company has taken measures
Effectiveness of Remediation	Measures deemed effective
	Measures not deemed effective

Prevention Measures	25%
Process Measures	No measures in place
	Reference to existing measures
	Limited update/adoption of measures
	Comprehensive update/adoption of measures
Policy Measures	No measures in place
	Reference to existing policy measures
	Update of existing policy measures
	Introduction of new policy measures
Training Measures	No new/additional training provided
	New/additional training to a limited num. of employees
	New/additional training to a significant num. of employees
Restructuring Measures	No measures in place
	Reference to existing measures
	Limited update/adoption of measures
	Comprehensive update/adoption of measures

Transparency Measures	10%
Disclosure of Measures	Private disclosure only
	Factual disclosure without details of measures
	Public of financial/legal/production consequences
	Public partial report on measures
	Full disclosure of measures taken
Nature of Response	Proactive measures
	Reactive measures only

Parameters under the Prevention Measures, Transparency Measures pillars and Nature of Response are always assessed, while parameters under the Direct Mitigation and Remediation pillars are only evaluated if the nature of the incident requires any of these measures.

Note that the assessment of the Company Response Rating places a higher weight on the quality of the measures taken to address the incident (i.e. Direct mitigation / emergency response, Prevention and Mitigation measures) rather than on the communication of such measures (i.e. Transparency and Nature of Response). The individual weight of each of the Company Response assessment areas is disclosed in Exhibit 12 above. While in case one or both, the Direct Mitigation and Remediation pillars are not assessed, the weights get distributed to the remaining applicable dimensions. However, the weight for the Transparency Measures pillar always remains unchanged.

S1 Sustainability Research analysts make the selections for each area based on the type of company response. Each pillar and parameter are assigned a weight and a scoring logic. Based on the analyst selections, an algorithm-based tool automatically calculates the Company Response Rating.

Assessing Relevant Updates

After creation, cases continue to be monitored on an ongoing basis to identify relevant updates. Relevant updates are the latest pieces of information about a controversy that suggest that the incident covered in the MSA case is still active and might still pose a negative impact on the company, its stakeholders, or the environment (e.g., in the form of new lawsuits, operational disruptions, dismissals, greater impact on stakeholders or the environment than initially assessed, among others). Generally, at least one of the three elements below would typically be present for an update to be considered material:

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

- The update demonstrates that the impact on stakeholders or the environment continues or is worse than what was initially assessed (number of people affected is greater, scope of environmental damage is bigger, etc.), or indicates new negative impacts.
- The update indicates additional impacts or risks on the company, in the form of new lawsuits, a significant increase in the number of plaintiffs added to an existent lawsuit, operational disruptions, dismissals, increased reputational or financial impact, among others.
- The update refers to a relevant stage or decision in an ongoing lawsuit.

Relevant updates may cover different types of events. Some non-exhaustive examples of common types of relevant updates can be found below:

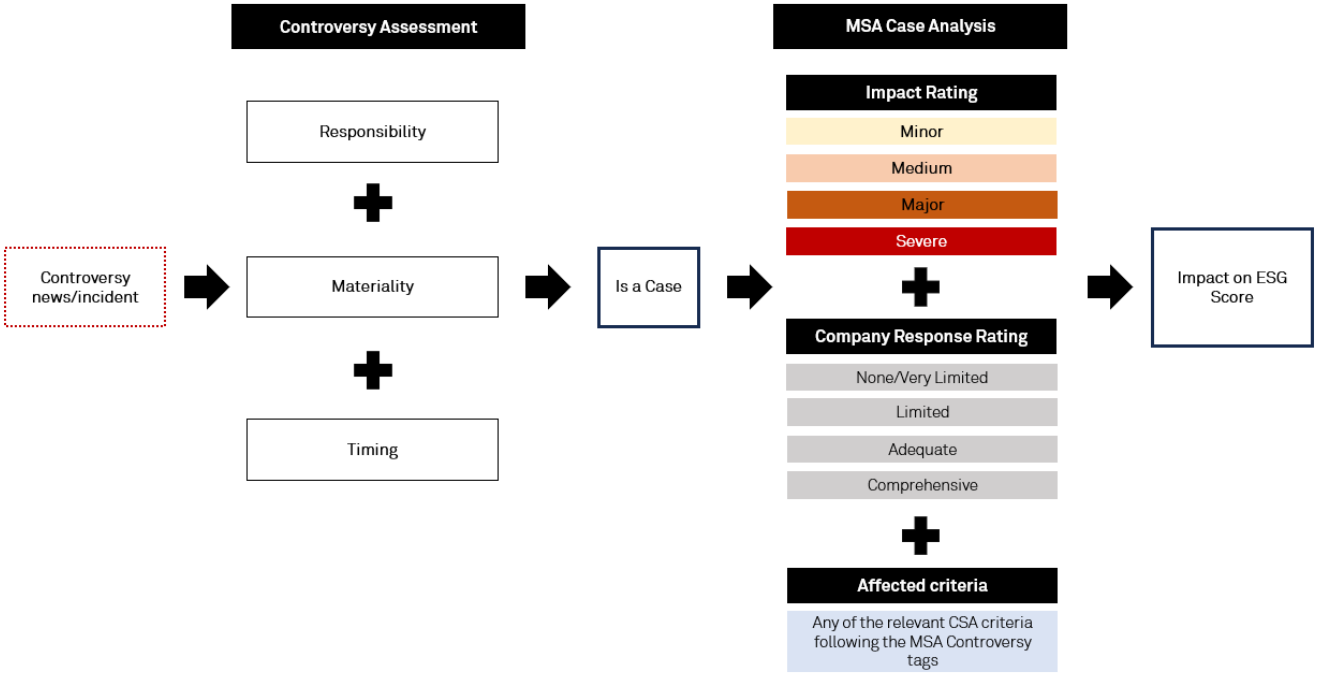

- New/additional similar incidents.
- New/additional operational/economic negative impacts on the company.
- New/additional protests against the company by relevant stakeholders (workers, communities, consumers, etc.)
- Substantial increase in scale and magnitude of environmental or social damage.
- Dismissal or resignation of senior executives because of the case.
- Additional judicial/extra-judicial claims or investigations on the matter or similar incidents.
- Judicial and non-judicial decisions confirming company's responsibility in the negative event.
- Significant updates on ongoing legal/judicial processes.
- New concluded investigations on the same matter with a negative outcome, linking the company to the issue.

The main consequence of a relevant update is that the impact rating of the MSA Case remains for another campaign cycle. If the relevant updates are of a higher severity than those incident details considered for the evaluation of the initial case, the Impact Rating might typically increase (e.g., from medium to major).

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Applying MSA Cases to the S&P Global ESG Scores

Companies part of the S&P Global's Controversy Analysis universe might also be part of the CSA. For these subset of companies, their latest S&P Global ESG Score ('ESG Score') will be adjusted as a consequence of an MSA case. The MSA impact on the ESG Score is determined by the Impact Rating, the Company Response Rating and the CSA Criteria affected by the incident ('Affected Criteria').

Selecting Affected Criteria

The Affected Criteria that are identified will be any of the **CSA Criteria**. In most cases, the more criteria affected, the greater the impact on the company's ESG Score. Incidents can affect any of the 15-30 industry-specific criteria assessed per company on average, though the following criteria are more commonly impacted in conjunction, increasing the likelihood of an ESG Score adjustment for these:

- **Business Ethics**: Impacted when a case involves unethical behavior, i.e., against the company's code of conduct or best-practice in business ethics.
- **Corporate Governance**: Impacted when the company's executive management or board of directors are involved in an incident. Such incidents are typically assessed as major or severe in nature.
- **Risk & Crisis Management:** Impacted when a company's wrongdoing indicates its risk control management processes and mechanisms are not effective.

A full list of all criteria may be found in the **S&P Global ESG Scores Methodology**.

The selection of the Affected Criteria follows a standardized mapping between the CSA Criteria and the MSA thematic tags (shown in Exhibit 1) depending on the nature of the controversy.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Determining the MSA Impact on the ESG Score

Once an MSA case has been assessed to determine the CSA Criteria affected by the incident ('Affected Criteria'), the incident's severity ('Impact Rating') and the company's response to the incident ('Company Response'), S&P Global will adjust the company's ESG Scores in two steps:

1) Translate the assigned Impact Rating and Company Response Rating to the corresponding 'MSA Multiplier' using the pre-defined MSA Multiplier Matrix (13).

2) Apply the MSA Multiplier in a fixed formula (14) to calculate the numerical impact on the Affected Criteria score.

Determining the MSA Multiplier

First, the applicable MSA Multiplier is determined following the MSA Multiplier Matrix below (Exhibit 11). The Matrix defines the applicable MSA Multiplier depending on the Impact Rating and Company Response rating of an MSA case.

Exhibit 11: MSA Multiplier Matrix

		Impact Rating			
		Severe	**Major**	**Medium**	**Minor**
Company Response Rating	None or very limited	**0**	**0.20**	**0.65**	**0.80**
	Limited	**0.05**	**0.35**	**0.70**	
	Adequate	**0.10**	**0.45**	**0.75**	**0.90**
	Comprehensive	**0.15**	**0.55**		

Severe cases are allocated a lower MSA Multiplier with the objective of increasing the impact on the total score. Severe cases where no measures from the company have been identified have the highest impact on the affected CSA Criteria scores, reflecting both the severity of the case and the mismanagement by the company.

If a company has no MSA cases identified, the criteria score will remain unchanged. As previously discussed, the MSA multiplier is used to adjust criterion scores downward in proportion to the severity of the MSA case/incident.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Determining Score Adjustment

As a second step, the relevant MSA Multiplier is applied to the score of the affected CSA Criteria.

To calculate the numerical impact on a given Criterion-level score, the MSA Multiplier is applied in a fixed and rules-based formula, as defined below:

Exhibit 12: Formula to calculate the Criterion-Score impact

$C_A = C_0 * MSA_M$

Where:

C_A = Final Criterion Score
C_O = Original Criterion Score
MSA_M = Multiplier

Exhibit 13 illustrates how the MSA Multiplier is aggregated into the final criterion score.

Exhibit 13: MSA Multiplier impact on final criterion score

Example 1: Major case, none / very limited Company Response	Example 2: Minor case, comprehensive Company Response
Criterion score (without MSA): 80	Criterion score (without MSA): 80
x	**x**
Multiplier: 0.20	**Multiplier**: 0.9
=	=
Final criterion score: 16	**Final criterion score: 72**

In general, if multiple cases impact the same criterion, the relevant MSA Multiplier is applied individually to each case, with second and ulterior cases taking the already previously reduced criterion score as an input for the formula.

An example of this can be seen in Exhibit 14 below for a company with two MSA cases impacting the Human Rights criterion.

1) Case 1: Impact on indigenous communities – MSA Multiplier of 0.35

2) Case 2: Sexual harassment of female employees – MSA Score of 0.75

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

In this case, the final Criterion Score is 23.62, as the two negative score impacts are accumulated.

Exhibit 14: Multiple MSA cases' cumulative impact at the criterion level

Case 1 MSA Multiplier: 0.35	
Criterion score (without MSA)	90
MSA Multiplier	0.35
Final Criterion Score: **31.5** 90* 0.35	

Case 2 MSA Multiplier: 0. 75	
Criterion score (already including Case 1)	31.5
MSA Multiplier	0.75
Final Criterion Score: **23.62** 31.5* 0.75	

For an example of an MSA case impact on the S&P Global ESG Score, see Appendix I - Example S&P Global ESG Score Adjustment from an MSA Case Assessment.

While an MSA case impact is computed at the level of the affected CSA Criteria, the total ESG Score will typically also be adjusted as a result of the impact at the criteria level.

ESG Score Maintenance and Communication

If a company's ESG Score is adjusted following an MSA case, the updated ESG Score and corresponding S&P ESG Score Report will be published on the company-facing CSA portal and on the client-facing S&P Capital IQ Pro Platform. As of August 2024, ESG Scores are updated on an ongoing basis.

Upon concluding an MSA case, the affected company will typically receive an S&P ESG Score Report on the day the ESG Score is published[12]. If changes are made to an existing MSA case because of a relevant update, the affected company will receive a new ESG Score Report. The Controversies section in the ESG Scores Report contains the details of the case(s), including the case(s) description, the Impact Rating, the Company Response Rating, the affected criteria, and the numerical impact on the CSA Criteria scores, ESG Dimensions scores, and total ESG Score. S&P Capital IQ Pro users can also access MSA case data, including the case(s) description, the Company Response Rating, the Impact Rating, and the affected CSA Criteria. Any information provided by companies in the client portal in the context of an MSA case is confidential and not publicly disclosed.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Duration of an MSA Case

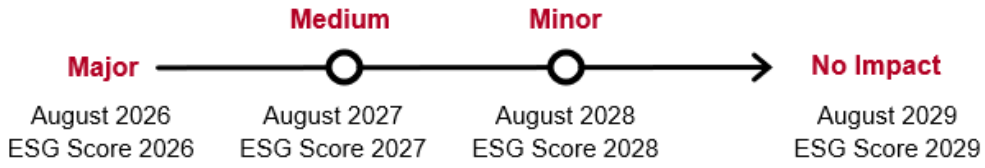

Unless relevant updates are identified, MSA cases typically follow a standard depreciation plan in which the initial Impact Rating of the case (i.e. Severe, Major, Medium, or Minor) drops in severity in the subsequent assessment cycle (e.g., major MSA case in year X, goes down to medium in year X + 1, to minor in year X + 2), until it becomes inactive. Nevertheless, an inactive MSA case can be reactivated if relevant updates are once again identified.

For cases or relevant updates identified during the transition period from one assessment cycle to the next or close to the end of the ongoing assessment cycle, the initial Impact Rating will typically be kept for the subsequent assessment year before the depreciation plan is triggered (i.e., the depreciation plan will not start in the subsequent assessment year given the relative newness of the identified MSA case).

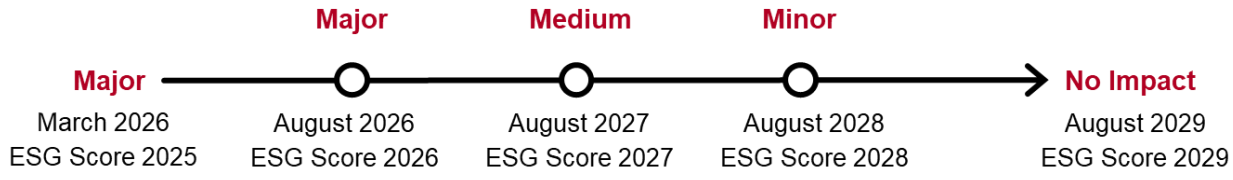

For cases linked to companies that are part of the CSA, an MSA Case will typically impact the company's latest available ESG Score. In the event an MSA case is identified prior to the release of the company's ESG Score for the corresponding CSA assessment year, the company's ESG Score of the previous CSA assessment year will be impacted until the new ESG Score becomes available. In this case, the Impact Rating of the case which impacted the ESG Score of the previous CSA Assessment year will remain the same once the new ESG Score becomes available (e.g. during the CSA 2024 assessment year a Medium case is created for Company X before the ESG Score 2024 of the company is available. In this event, the company's ESG Score 2023 will be impacted by the Medium case, and as soon as the ESG Score 2024 becomes available it will continue to be impacted by the Medium case).

Exhibit 2: Fictional example of MSA cases depreciation with and without relevant updates

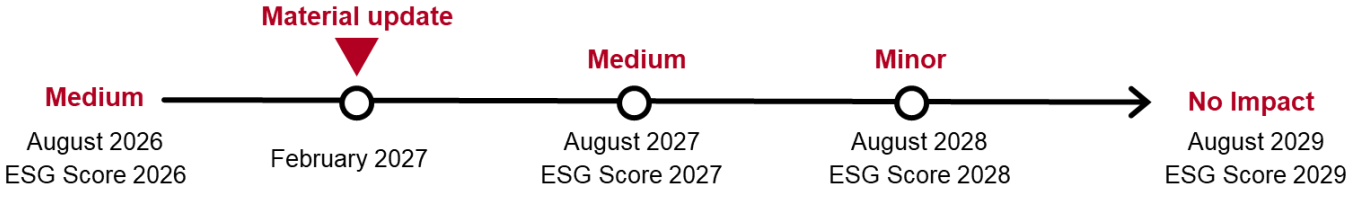

Depreciation of a **major** MSA Case published in August 2026 with **no relevant updates.** For companies part of the CSA, the Campaign Year of the ESG Score is indicated.

Depreciation of a **major** MSA Case published in April 2026 with **no relevant updates.** For companies part of the CSA, the Campaign Year of the ESG Score is indicated.

Depreciation of a **medium** MSA Case published in August 2026 **with relevant updates** in February 2027. For companies part of the CSA, the Campaign Year of the ESG Score is indicated.

Monitoring and Review

All new methodologies and any material changes to existing methodologies are reviewed and approved by an independent methodology governance committee.

Assumptions and Limitations

Assumptions: n/a

Limitations:

- Media reporting on ESG-related controversies varies significantly across regions and is influenced by factors such as press freedom or regulatory environments. This represents an inherent limitation of methodologies that depend on media-based sources.
- The Company Response Rating of an MSA Case is assessed using both, publicly available information and, relevant information provided directly by the company when contacted for their MSA Case. However, not all companies use the opportunity to share details about measures taken in relation to the identified negative event, which may limit data availability compared to those that respond.

Maintenance/Updates

The MSA methodology is reviewed periodically as appropriate, but at least annually.

Updates and Enhancements

Month/Year of Enhancement	Enhancement Description	Impact of change
2026	Added details on Responsibility element and involvement criteria. Added new section describing the methodology's limitations. As of March 2026, media and stakeholder stories on corporate controversies are be monitored through S&P Global's proprietary controversies screening model. Prior to this date, corporate controversies part of the MSA were monitored, compiled and pre-screened by S&P Global' s former partner RepRisk.	Increased transparency. This change did not affect the current MSA methodology, or its analytical application.
2025	No significant update to the document	-
2024	Additional information on different pillars of the Impact Rating Introduction of an updated Company Response Rating methodology	Increased transparency Updated Company Response Rating methodology for all cases affecting ESG Scores 2024 and onwards; increased granularity of assessment.
2023	Introduction of 'Severe' Impact Rating category	New impact rating category better reflects the overall level of severity of impact.

Related Documentation / Appendices

This methodology document gives an overview of the MSA approach and is intended to be read in conjunction with the S&P Global ESG Scores Methodology, which provides additional detail on the policies, procedures and calculations described herein.

The MSA Methodology is also a fundamental part of the methodology behind S&P Global's UNGC Screening Dataset.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

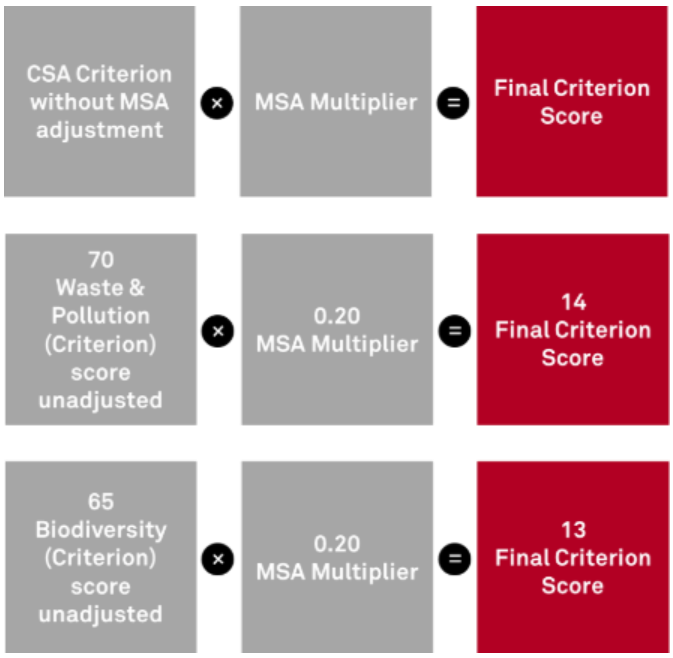

Appendix I

Example S&P Global ESG Score Adjustment from an MSA Case Assessment

The following fictional example demonstrates how the MSA process works in a real-world situation and how it impacts an S&P Global ESG Score.

In 2030, a major digital publication reports that Company A in the Oil and Gas sector has been fined for improperly disposing of wastewater from petroleum production into a nearby marine environment. NGOs are heavily criticizing the company and are preparing to take legal action. This incident is captured by S1 which opens an MSA case following the guidance – noting company responsibility (Company A has a waste disposal policy that it violated) and materiality (oil industry regulation imposes a fine for improper waste disposal; reputational impact as the incident is covered by major media; and material impact on the environment). S1 contacts Company A but it does not respond privately or publicly nor take any actions to avoid repeating the incident.

Exhibit 17: Calculation of Company A's adjusted Criteria scores

The case is assessed by S1 which determined a **'Major' Impact Rating** given the quantity of wastewater dumped into the marine area, the fine being imposed by the regulator, and impending lawsuits from multiple NGOs**.** Given the lack of any public communication or action, the MSA case is assigned the **'None or very limited' Company Response Rating.** Owing to the nature of the case, it will impact multiple CSA Criteria, including, but not limited to, the **Waste & Pollutants criterion** which contains a question regarding waste disposal, and the **Biodiversity criterion**, as the incident has negatively affected a marine environment.

With the assessment of this MSA case complete, S&P Global then adjusts the scores of the Affected Criteria using the inputs from the Impact Rating and Company Response Rating.

Per the pre-defined methodology, a 'Major' Impact Rating and a 'None or very limited' Company Response Rating produces an MSA Multiplier of '0.20'. Before the incident came to light, Company A had a fictional score of 70 for the 'Waste & Pollutants' Criterion and a score of 65 for the 'Biodiversity' criterion. Combining these numerical inputs through the pre-defined formula, Company A's 'Waste & Pollutants' and 'Biodiversity' fictional Criteria scores are adjusted from 70 and 65 respectively to 14 and 13 respectively. This is calculated in Exhibit 17.

After adjusting the scores of all Affected Criteria, the S&P Global ESG Score for Company A is updated to reflect the input of these new Criteria scores. S&P Global informs Company A of the details of the assessment, including the score adjustments. These details are posted on the company-facing CSA portal and the client-facing S&P Capital IQ Pro Platform.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

Appendix II

Assessing Company Response (Previous methodology)

Evaluation of remedial actions taken by the company includes determining if the company has taken appropriate measures to mitigate adverse effects and prevent reoccurrence of similar incidents, as well as how transparently it has communicated such measures to its stakeholders. The Company Response will be evaluated and categorized as follows:

- No communication and no measures taken
- Some communication and no or partial measures taken
- Adequate communication and appropriate measures taken
- Adequate communication and appropriate measures taken and publicly disclosed

This evaluation is determined through the parameters described in Exhibit 18.

Exhibit 18: Rating of Company Response

No communication and no measures taken	There is no public information released by the company on the identified case and there is no indication that measures have been taken to avoid similar cases in the future.
Some communication and no or partial measures taken	The company has communicated about the issue, and partial measures might have been taken. However, the measures are not considered sufficient, appropriate, or timely. The measures taken by the company are limited to the specific case and its short-term consequences. However, such measures are not considered sufficient to minimize the likelihood that similar issues will reoccur in the future and to address systemic issues within the company.
Adequate communication and appropriate measures taken	The company has communicated about the issue and about the measures taken to address both the specific case and its short-term consequences as well as the future reoccurrence. The measures are proactive, timely, forward-looking and address the issue from a long-term, company-wide perspective to minimize the likelihood of the issue reoccurring in the future. However, such measures are not publicly disclosed.
Adequate communication and appropriate measures taken publicly disclosed	The company has taken appropriate measures as described below, and these have been publicly disclosed.

The appropriateness of measures depends on the severity of the case, as severe issues necessarily require particularly robust and more comprehensive sets of actions. Those with the following characteristics are generally considered insufficient:

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global's prior written consent.

1. Only minimum actions or payments mandated by the courts or authorities.

2. Dismissal of individuals held accountable or the termination of business relationships without establishing mechanisms to prevent reoccurrence.

3. Include ambiguous statements, e.g., “improvements to internal policies or codes of conduct”, or other non-specific language regarding improvements to control mechanisms.

4. Payment of voluntary settlements and compensation of victims/damaged parties without also establishing mechanisms to prevent reoccurrence.

Instead, measures exhibiting the following characteristics are generally deemed appropriate:

1. Proactive, timely and forward-looking actions that seek to address the issue over the long-term, and which include company-wide controls to minimize the likelihood of reoccurrence beyond just the individuals held accountable.

2. Comprehensive plans that strengthen specific procedures, policies, or systems. These may include training, restructuring, enhanced control mechanisms, leadership changes and tools to monitor the effectiveness of the measures taken. In some instances, they may result in the discontinuation of a controversial or problematic product line or unit.

Proprietary: Intended for Recipient only. Further distribution or publication of the content in any form requires S&P Global’s prior written consent.
